As a Senior Application Engineer in our Product Area, you will contribute to the development of a modern lakehouse architecture buildon Azure Datalake using Python to implement business services. You will implement business functionality that enables our customersto run their accounting processes and generate data to meet their reporting needs. You will design, develop, automate, and supportbackend applications that combine data elements from multiple domains and systems. You will leverage innovative technologies andframeworks to enable scalable and efficient processing. You will collaborate with other engineers, analysts, product owners andstakeholders to deliver value-added solutions that meet the business needs and expectations.
We are living DevOps. We own the implementation of the business functionality and operate our workload in production. We are lookingfor an ambitious application engineer, who will help to build and deploy business services to production environments.
Key tasks:
Understand business requirements and convert them into technical specifications
Oversee the end-to-end application architecture
Drive the design and build of business services that create financial data by combining input from various sources
Hands-on coding in Python /PySpark
Take ownership for the based implementation of functional and non-function requirements. Ensure a high level of test automation
Coach junior team members and peer reviews
Build up sustainable relationships with key business and IT stakeholders to become a trusted partner along with the product owner
Meet with business stakeholders, understand the requirements, and advise on efficient solutions
Ensure timely customer communication and coordination of follow-up activities
Apply and implement Agile Scrum and DevOps standard methodologies

Contribute to the operations during quarterly closing cycles
Your main responsibilities are:
As an Senior Application Engineer you contribute by:
Collaborating with the product owner to build a target architecture for the products in scope of the team
Design data transformation services and data flows. Lead their implementation and actively contribute hands-on to the coding
Collaborating with other Engineering leads to ensure design decisions are aligned within the product area
Perform peer code reviews

Present and communicate ideas and design to various stakeholder for review and brainstorming
Ensure technical design and implementation are in line with architecture and meet quality requirements (e.g., performance, reliability,availability)
Implement software engineering practices to ensure the quality, performance, and maintainability of our applications
Mentoring and support professional skill development of junior colleagues.

About the Team
The position is part of the Cashflow Enhancement team that is newly created in the Subledger Input Preparation Product Area. Thisarea designs and runs business applications at the Finance IT Division of Swiss Re.
The Product Owner is in Switzerland and leads a global team that develops and runs the next generation of finance businessapplications for Swiss Re.
The team builds on a lakehouse architecture using Azure Databricks, Azure Data Factory and Azure Data Lake (Delta Lake) with Pythonbeing the main programming language and PySpark is used for large scale data engineering.

About you:
As a successful candidate for this role, you possess
degree in a relevant quantitative field, e.g. Computer Science, Mathematics, Engineering or other equivalent
8+ years of experience in designing and implementing reliable and scalable software through the full software development lifecycleusing modern IDEs, code management and automation tools.
Hands-on experience with test driven development
Strong understanding of software engineering techniques with modern programming languages and analytical frameworks. Proficient inPython, PySpark, SQL
Proficient in Spark based data lake & extended services like, Azure Databricks, Azure Data Factory, Azure Data Lake etc.
Expertise working with relational databases like Oracle/Postgres
Experience with Integration technologies like REST/SOAP APIs
Problem-solving skills and commitment to quality and timely delivery
Strong interpersonal, written, and verbal communication skills, including clear articulation of technical topics to a non-technical audience
Experience as team leader is an advantage
A desire to continuously upskill & stay relevant with emerging technologies

Interested in this new challenge? We are looking forward to your application!
